

High-Voltage **USDC Splits** for Humans & **AI Agents**.

Instant, zero-approval, multi-party USDC payment rails and creator tip jars — natively powered by Circle's Arc Network, engineered for the ERC-8004 / ERC-8183 Agentic Economy.

GAS TOKEN

Native USDC — zero approval transactions required.

EXECUTION

Atomic, sub-second finality, sub-cent fees, non-custodial.

PRECISION

Basis-point exact (10,000 bps). Zero trapped wei, guaranteed.

THE PROBLEM

Legacy chains trap splits in a multi-hop payment maze.

- ⚡ **The approve() trap:** on Ethereum, Base, and Arbitrum, payers hold volatile ETH for gas AND submit an ERC-20 approve() before distributing USDC — duplicate fees kill micro-splits.
- ⚡ **AI swarms lack dollar rails:** autonomous agents (planners, workers, verifiers) can't manage multi-token gas portfolios — they need a deterministic single-currency settlement rail.
- ⚡ **Web2 creators locked out:** seed phrases, gas volatility, and rounding-loss contracts make crypto payouts unusable for collaborative teams.

THE SOLUTION

ArcSplit — single-hop, atomic USDC distribution.

- ⚡ **Native USDC settlement:** payers send native USDC straight into `ArcSplit.sol` — one transaction, zero approvals.
- ⚡ **Sub-second finality, sub-cent fees:** Arc L1 delivers deterministic execution.
- ⚡ **Mathematical zero-loss:** basis-point allocations with automated remainder forwarding — 0 wei ever trapped.
- ⚡ **Permanent payment permalinks:** `?split=0x...:50;0x...:50` — one-click shareable tip jars and invoices.

Non-custodial, atomic, **audited-pattern safe.**

- ⚡ **OpenZeppelin ReentrancyGuard** + strict Checks-Effects-Interaction.
- ⚡ **Max 50 recipients** per batch — block-gas-exhaustion protection.
- ⚡ **Exact-bps validation** (sum == 10,000) and on-chain `PaymentSplit` event emission for accounting and tax indexing.
- ⚡ **806-line Foundry test suite** — 100% pass rate. Independent third-party audit requested via this grant.

Arc Mainnet (Chain 5042) — verified

Revenue rails for **autonomous agent swarms**.

- ⚡ **ERC-8004 (Agent Identity):** verifiable on-chain agent identities execute instant task splits.
- ⚡ **ERC-8183 (Job Escrows):** escrow contracts settle milestones directly through ArcSplit — worker agents, verification oracles, and human supervisors paid atomically.
- ⚡ **Two-line SDKs:** TypeScript (ethers) and Python (web3) snippets ship in the dApp — drop-in for LangChain, AutoGen, CrewAI swarms.

⚡ **ERC-8183 JOB**

Task completed → payout triggered.

🚆 **ERC-8004 AGENT**

Circle agent wallet executes split.

💰 **SETTLED USDC**

Atomic pass-through, sub-second.

Live today. Deeper tomorrow.

- ⚡ **Live — Native USDC on Arc:** deployed and actively routing native digital dollars (mainnet + testnet).
- ⚡ **Live — Cross-chain ingestion:** Relay bridge modal routes USDC from Ethereum, Base, Arbitrum, Optimism, Polygon, Solana into Arc.
- ⚡ **Planned — Circle Programmable Wallets:** passkey/social-login non-custodial onboarding with USDC gas sponsorship.
- ⚡ **Planned — Circle CCTP:** native mint/burn cross-chain splits — pay on Base, settle natively on Arc, zero slippage.
- ⚡ **Planned — Circle Gateway:** unified-balance routing for high-frequency institutional AI swarms.

A \$20T+ stablecoin lane meets the agentic economy.

- ⚡ **Stablecoin settlement:** \$20T+ annualized volume, USDC leading compliance and enterprise adoption.
- ⚡ **Agentic AI:** millions of autonomous agents will require programmatic micro-settlement rails on Arc.
- ⚡ **Traction today:**
 - ⚡ Contracts deployed & verified on Arc **Mainnet** + **Testnet**, 806-line test suite green.
 - ⚡ Production dApp live: `arcsplit-two.vercel.app` · MIT open source: `github.com/metathesage/arcsplit`

Free core rail. Premium where it compounds.

- ⚡ **Core splitting — free forever:** open public good for the Arc ecosystem.
- ⚡ **Premium permalinks:** branded link-in-bio tip jars and vanity domains for creators.
- ⚡ **Accounting export:** automated tax/CSV/QuickBooks reporting for teams.
- ⚡ **Enterprise SLA:** gas-sponsored, high-frequency API webhook settlement for AI swarms.

Four funded milestones.

- ⚡ **2026-03-31 — V1 Core + Agent SDK:** 50 unique multi-party splits executed on Arc Mainnet.
- ⚡ **2026-05-15 — Circle Programmable Wallets:** 250 creator tip jars generated via passkey onboarding.
- ⚡ **2026-06-30 — Circle CCTP cross-chain payouts:** \$50,000 in cross-chain USDC splits settled, zero slippage.
- ⚡ **2026-08-31 — Agent Oracle & ERC-8183 escrow hooks:** 10 autonomous AI agent swarms executing recurring on-chain splits.

TEAM & CONTACT

Ship fast. **Verify everything.**

- ⚡ **Lead Architect & Developer:** Sage — @metathesage
- ⚡ **Live App:** `arcsplit-two.vercel.app`
- ⚡ **Open Source (MIT):** `github.com/metathesage/arcsplit`
- ⚡ **Target Ecosystem:** Arc Network / Circle Developer Services
